

Methods in Health Data Science with R

September-October 2026 Cohort

Imad EL BADISY, PhD

Two intensive R courses in methods for health data science

Online · Live cohort · September to October 2026

Registration is open

Two independent, cohort-based courses: a base course in applied biostatistics and an advanced course in machine learning for health research, both taught in R with reproducible Quarto workflows. Each course is self-contained; taking them in order builds a complete methods pathway.

Calendar

BIOSTATR	ML4HOR
Applied Biostatistics with R (base) From: 07/09/2026 To: 25/09/2026	Machine Learning for Health Outcomes (advanced) From: 28/09/2026 To: 16/10/2026

Each course: 3 weeks, 9 sessions (18h). Mon/Wed/Fri 18h00-20h00, Morocco time.

The Offer

- Register for either course, or both
- Live sessions + slides, notebooks, datasets, and exercises for every session
- Small cohort, direct feedback, exercises corrected in-session
- Ends with a short reproducible Quarto mini-project
- Teaching in French, with English for statistical/technical terms

Who it's for

Clinicians, researchers, PhD students, public health professionals, and analysts who want a rigorous, hands-on introduction to modern health data analysis in R. No advanced statistics background required for BIOSTATR; ML4HOR builds on it but can be taken independently.

Instructor: Imad EL BADISY, PhD | elbadisyimad.com | elbadisyimad@gmail.com

Full detailed program (session-by-session dates and content) available for each course.
