

Methods in Health Data Science with R

September-October 2026 Cohort

Imad EL BADISY, PhD

Four intensive R courses in methods for health data science

Online · Live cohort · September to October 2026

Registration is open

Four independent, cohort-based courses take participants from applied biostatistics through machine learning, evidence synthesis, and agentic data science, all taught in R with reproducible Quarto workflows. Each course is self-contained: no prerequisite is mandatory, though taking them in order builds a complete methods pathway.

Calendar

BIOSTATR	ML4HOR
Applied Biostatistics with R From: 07/09/2026 To: 20/09/2026	Machine Learning for Health Outcomes From: 21/09/2026 To: 04/10/2026
METAR	AGENTR
Conducting Meta-Analysis with R From: 05/10/2026 To: 18/10/2026	Agentic Data Science with R From: 19/10/2026 To: 01/11/2026

Each course: 2 weeks, 8 sessions (16h). Mon/Wed/Fri 18h00-20h00, Sun 10h00-12h00, Morocco time.

The Offer

- Register for any single course, or all four
- Live sessions + slides, notebooks, datasets, and exercises for every session
- Small cohort, direct feedback, exercises corrected in-session
- Ends with a short reproducible Quarto mini-project
- Teaching in French, with English for statistical/technical terms

Who it's for

Clinicians, researchers, PhD students, public health professionals, and analysts who want a rigorous, hands-on introduction to modern health data analysis in R. No advanced statistics background required for BIOSTATR; the other three build on it but can be taken independently.
